

Did You Know?

The Alguita Research Institute says that the ratio of plastic to plankton in the oceans is 6:1 and rising.

Instead of wrapping your Christmas presents in disposable wrapping paper, use a decorative fabric which can be reused.

The Recycler

Fall Edition Issue 1: December 2012

Ditch the Disposables

- Americans throw away 25 million Styrofoam cups a year.
- One Styrofoam cup takes 500 years to break down.
- Paper plates are coated with chemicals that prevents them from biodegrading, and consume large amounts of trees and water.

You can even save money by using a reusable mug on campus. Starbucks and Dunkin Donuts both offer discounts if you bring in your own reusable mug!

Disposable plates, cups, bowls, and utensils creates mountains of waste!

Buy re-usable, re-washable, non-disposable plates, cups, bowls, and utensils!

If every US household replaced a package of 40 paper plates with re-usable ones, 487,000 trees would be saved.

The 13.5 million Starbucks customers who used a re-usable mug kept 586,000 pounds of waste out of the landfill.
