

Divorce Rate in the U.S., 2013

Krista K. Payne

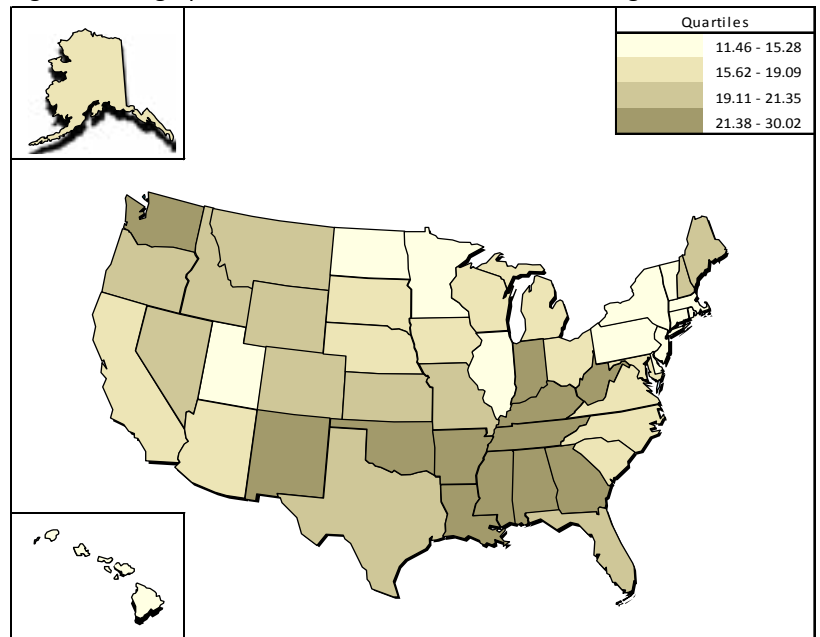

- Approximately half of all current marriages are expected to end in divorce (Kennedy & Ruggles, 2014).
- In 2013, the divorce rate in the U.S. was 18.47. That is, slightly fewer than 19 per 1,000 marriages ended in divorce in 2013. This represents a 5% decrease since 2011 when the national divorce rate was 19.44.
- In any given year, there are more marriages than divorces in the U.S. There were almost two marriages for every one divorce in the U.S. in 2013.¹

¹ The divorce rate = [(number of women divorced in the past 12 months) / (number of women divorced in the past 12 months + number of currently married women)] * 1000
