

Current Sexual and Romantic Involvement among Young Adults by Race/Ethnicity and Gender

Kara Joyner, Grace Kao, and Kelly Balistreri

005 Williams Hall
Bowling Green State University
Bowling Green, OH 43403

Source: National Longitudinal Study of Adolescent Health (Add Health), Wave IV (2008 survey weights applied).

Note: The analysis is limited to respondents who report that they are either white, black, Hispanic or Asian in Wave I. Non-Hispanic respondents reporting more than one race were assigned the race that best describes them. Average age of respondent ranged between 25 and 32 years at Wave IV.

This research was supported in part by the Center for Family and Demographic Research, Bowling Green State University, which has core funding from the Eunice Kennedy Shriver National Institute of Child Health and Human Development (R24HD050959-07).

This research uses data from Add Health, a program project directed by Kathleen Mullan Harris and designed by J. Richard Udry, Peter S. Bearman, and Kathleen Mullan Harris at the University of North Carolina at Chapel Hill, and funded by grant P01-HD31921 from the Eunice Kennedy Shriver National Institute of Child Health and Human Development, with cooperative funding from 23 other federal agencies and foundations. Special acknowledgment is due Ronald R. Rindfuss and Barbara Entwisle for assistance in the original design. Information on how to obtain the Add Health data files is available on the Add Health website (<http://www.cpc.unc.edu/addhealth>). No direct support was received from grant P01-HD31921 for this analysis.
