SAMPLE MATH PLACEMENT TEST C

Math Placement Test C: For students who have completed a semester in any one of the following subjects: Analytic Geometry, Precalculus, Analysis, Trigonometry, or Calculus.

Math Placement Test C is the only placement test which provides a Mathematics Placement Recommendation of Calculus (131H or 131). In particular, it can result in a recommendation from 095 through 131H.

The questions on this sample test are similar to the questions on Test C in format and level of difficulty. However, not all of the topics or types of questions that are on Test C are included here.

The Topics on TEST C can be classified into two sets, (a) Calculus Readiness and (b) Trigonometry. There are a total of 35 multiple-choice mathematics questions contained in Test A. Approximately two-thirds of the questions relate to Calculus Readiness and the other third on Trigonometry.

Calculus Readiness questions focus on: Geometry and measurement, graphs of functions, word problems and modeling, concept formation, numerical awareness, exponential functions, exponents and logarithms, equations and factoring, functionaol notation, inequalities, absolute value, basic trigonometry

Trigonometry questions focus on: Definition of trigonometric functions, right angles, evaluation of special angles, related angles, radian measure, graphing, identities, Laws of Sines and Cosines, trigonometric equations, arc functions, distance, straight line, conics, functions (notation, composition), graphs and their properties, logarithmic and exponential functions, higher degree polynomials, absolute value, inequalities.
