

# Homework #1

Name: \_\_\_\_\_ Awarded points: \_\_\_\_\_ of 1

Date: September 9.

Due: Friday, September 13

All homeworks are graded. One point toward the final grade is awarded for correct solution of each assignment (0 for incorrect solution). This “mild” grading is introduced to reward students for their systematic effort toward the improvement of the final grade in CH306 class. In other words, 20 points from HWs may improve your final grade. On the other hand if you are couple of times sick, busy or your solution to HW is wrong, nothing bad will happen. The homework is, however, an important tool for me to gauge what we need to focus on during our exercise sessions (location/time will be posted on this page soon). Solution/key will be posted here.

Write IUPAC (systematic) name to each molecule
