

Dear **GR**anting Access to **M**ath and **S**cience (**GRAMS**) Scholarship Applicant,

This scholarship has been designed in response to the growing need for scholars in the Science, Technology, Engineering and Math (STEM) fields in the United States and is funded by the National Science Foundation. The successful candidate is a student who meets academic expectations of university level incoming undergraduates in the Math and Science fields but may require additional financial support. This scholarship is for students starting at Owens Community College who will transfer to Bowling Green State University. The money will fill financial voids after any previously awarded and current grants and scholarship award monies are expended.

Student Selection Process and Criteria: Scholarships will be awarded to students by the SETGO Scholarships Award Committees based on the following criteria: high school rank; performance in college prep math courses, participation in and awards for science and math activities including science- and math-fair projects, successful participation in leadership activities and community service, a written statement expressing interest in pursuing a science or math-related career, and recommendations from science and math teachers regarding a student's potential for success in attaining a science or math degree in college.

Attached is the application. If you feel you qualify for this type of assistance award, have a GPA of 2.75 - 3.0 or better and the intent to graduate in a bachelor of science program from BGSU, please complete this application and turn it into the SETGO office at Bowling Green State University.

Send questions and/or completed application materials to:
