1 Documentation
All of the questions were asked in the "Control Card" section of the questionnaire. For those questions from the "Control Card" with corresponding data, as well as the created variables that aren't associated with ONE specific question, the variables' section location in the data dictionary are also included. These section names also contain the name of the data file associated with the respected variable; FMLY or MEMB.

2 Variable Name
The CE data are provided in three formats: SPSS, SAS, and Stata. In SPSS and SAS data files, all variable names are in uppercase--however, these statistical software packages are not case sensitive. The variables in the provided Stata data files are in lowercase and Stata is case-sensitive. For this reason, the variable names in this snapshot are all given in lowercase.

3 This question is asked in all but the first wave.

4 This question is only asked in the first wave.

5 The data associated with this variable reveals 3,383 observations with missing values which are not documented in the codebook/data dictionary. Due to the nature of the question, we are assuming these "missing" observations represent unmarried respondents.

6 If NO non-relatives are living in the household, the household members are broken into appropriate consumer units (CU's).

7 This question is asked of respondents with non-relatives present in their household.

This project was supported with a grant from the U.S. Department of Health and Human Services, Office of the Assistant Secretary for Planning and Evaluation, grant number 5 UOI AEOOOOI-04.
