

# Familial Responses to Financial Instability, How the Family Responds to Economic Pressure: A Comparative Study, 2009

## *Notes on Data*

### **1 Study Description**

This study focused on how families respond to financial instability and economic pressure. A survey of over 1,000 adults aged 18 years and older who have a child younger than 18 years at home was conducted by Knowledge Networks on behalf of the National Center for Family & Marriage Research. The survey was completed by 1,169 respondents out of 1,855 cases (63 % response rate). In addition to the main survey, respondents were also administered a one-question survey about insurance. Along with the survey variables from the main and the one-question surveys, Knowledge Networks' standard profile, and a series of data processing variables created by Knowledge Networks are included in the data file for the eligible cases (n = 1,169).
