

First Marriage vs. Remarriage: Demographic Characteristics

Author: Valerie Schweizer

In recent decades, rates of both first marriage and remarriage have declined (FP-20-01; FP-19-17). These trends can be partially attributed to the delay in first marriage formation with the median age at first marriage, now at record highs for women and men (FP-19-06). This profile uses data from the 2008 and 2018 American Community Survey 1-year estimates to investigate the proportions of currently married adults (men and women) in first marriages versus remarriages. We also examine variation in marriage order among currently married adults by age, education, and race/ethnicity for 2018. For a comparison of first marriage versus remarriage among women who married in the last year, see FP-19-08.

First Marriage vs. Remarriage

- The proportions of currently married adults in a first marriage and a remarriage remained stable since 2008.
 - Among all adults who were currently married in 2018, 77% were in a first marriage, and 23% were in a remarriage.

Age

Figure 2. Currently Married Adults in a First Marriage and Remarriage by Age, 2018

Source: NCFMR analyses of ACS 2018 1-year estimates

- At every age group, the majority of currently married adults were in a first marriage.
- The share of married adults in a remarriage increased with age.
 - Those aged 65+ had the largest share in a remarriage (31%), whereas those aged 18 to 24 had the smallest at only 2%.

The proportions of currently married adults in a first marriage and a remarriage remained stable since 2008.

Education

- There was some variation in the share of currently married adults in a first marriage and remarriage by educational attainment.
- Just over one in four individuals with either a high school diploma or some college were in remarriages (27%), the highest across educational groups.
- Among those with at least a bachelor's degree, less than one in five were in a remarriage (18%).

Race/Ethnicity

Figure 4. Currently Married Adults in a First Marriage and Remarriage by Race/Ethnicity, 2018

Source: NCFMR analyses of ACS 2018 1-year estimates

- Asians had the highest share in first marriages--90% of currently married Asians were in a first marriage.
- Whites had the lowest share in first marriages (74%) and the highest share of remarriage (26%), followed closely by currently married Black adults (76% and 24%, respectively).
- Hispanic and Other currently married adults had identical shares, with 82% in a first marriage and 18% in a remarriage.
