# Financial Prospects and Union Dissolution in Young Adulthood

Lindsey M. Cooper (Icooper@bgsu.edu), Wendy D. Manning, Monica A. Longmore, & Peggy C. Giordano

**Department of Sociology Bowling Green State University** 

# Background

- Economic resources have long been identified as an important correlate of union dissolution.
- Our understanding of this association is complicated by prior work's focus on objective economic indicators.
- Empirical investigation of economic resources and union dissolution in young adulthood has also been limited.

## **Current Investigation**

- We examined the association between financial prospects and union dissolution in young adulthood.
- We assessed the gendered dynamics that underlie the association between financial prospects and union dissolution.

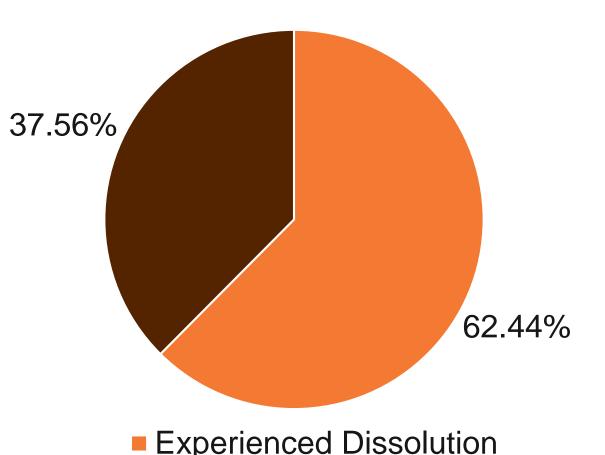

## **Data and Sample**

- Toledo Adolescent Relationships Study (TARS)
- Five waves of data collected (2001-2011)
- Respondents aged 22-29 at the fifth interview
- Analytic Sample (n=599)
  - Included respondents who were in a current, different-gender relationship at the fourth interview (2006).

## **Key Measures**

- Union Dissolution
  - Experienced breakup between fourth and fifth interviews (≈ 5 year interval).

- Experienced Dissolution
- No Dissolution
- Financial Prospects (α=.66)
  - [Partner]'s financial future is bright.
  - [Partner] doesn't know what he/she wants as far as his/her future.
  - I wish [Partner] had a better job.
- Gainful Activity
  - Employed full-time or enrolled in school.

#### Analyses

|  | Model 1 | Model 2 | Model 3 | Model 4 |
|--|---------|---------|---------|---------|
| Independent Variables                                  |         |         |         |         |
| Socioeconomic Characteristics                          |         |         |         |         |
| Financial Prospects of Partner                         | 0.92*   | 0.92*   | 0.89**  | 0.92*   |
| Gainful Activity (Respondent) (Not Gainfully Active)   |         |         |         |         |
| Gainfully active                                       | 1.24    | 1.41    | 0.99    | 1.01    |
| Gainful Activity (Partner) (Not Gainfully Active)      |         |         |         |         |
| Gainfully active                                       | 0.96    | 1.01    | 0.83    | 0.81    |
| Control Variables                                      |         |         |         |         |
| Sociodemographic Characteristics                       |         |         |         |         |
| Racial Composition of the Relationship (Same-race)     |         |         |         |         |
| Interracial  |         | 1.20    | 1.40    | 1.40    |
| Age Difference (Same-age)                              |         |         |         |         |
| Different age  |         | 0.99    | 1.30    | 1.34    |
| Gender of Partner (Female)                             |         |         |         |         |
| Male   |         | 1.03    | 1.25    | 1.25    |

| Trust  |         |         |         | 0.96    |
| Validation   |         |         |         | 1.07    |
| Love   |         |         |         | 0.86    |

Note: \*p<0.05; \*\*p<.01; \*\*\*p<.001 Odds Ratios are presented

#### Results

- Young adults who reported their partners' financial prospects more positively had lower odds of union dissolution, net of key sociodemographic and relationship correlates.
- There were no gender differences in the association between financial prospects and union dissolution.

#### **Discussion**

#### CONTRIBUTIONS

- Focused on a population that is most likely to endure financial stress and experience relationship instability.
- Explored the utility of subjective and objective economic indicators.
- Accounted for a variety of sociodemographic and relationship characteristics.

#### CONCLUSIONS

- Subjective indicators are more developmentally appropriate for young adults, many of whom are in the process of developing their human capital.
- Economic certainty matters to the way young adults navigate their relationships, but is not dependent on gender.
