

# Charting Marriage & Divorce in the U.S.: The Adjusted Marriage Rate

Krista K. Payne

Beginning in 2008, the U.S. Census Bureau began asking respondents of the American Community Survey about events experienced in the past 12 months including marriages and divorces. In the same year, they also began asking respondents to report on the number of times they had been married. In conjunction with information on respondents' marital status, the NCFMR has been calculating and reporting on marriage and divorce rates in the U.S. since these variables were first made available to the public. In a special release series, we provide single year estimates charting marriage and divorce rates spanning the years 2008-2017. In this first release, we focus on the adjusted marriage rate.

## Adjusted Marriage Rate

The adjusted marriage rate is computed using the following equation:

$$\left[ \frac{\text{number married in the past 12 months}}{(\text{number married in the past 12 months} + \text{the currently unmarried population aged 15 or older})} \right] \times 1,000$$

Table 1. Marriages in the Last Year and Marriage Rates: United States, 2008—17

2010 .....	2,113,521	31.9	+/- 0.34	2,142,639	36.0	+/- 0.41	4,256,160	33.8	+/- 0.26
2009 .....	2,208,971	34.0	+/- 0.37	2,286,750	39.0	+/- 0.45	4,495,721	36.4	+/- 0.29
2008 .....	2,227,084	34.8	+/- 0.37	2,327,018	40.5	+/- 0.44	4,554,102	37.5	+/- 0.29

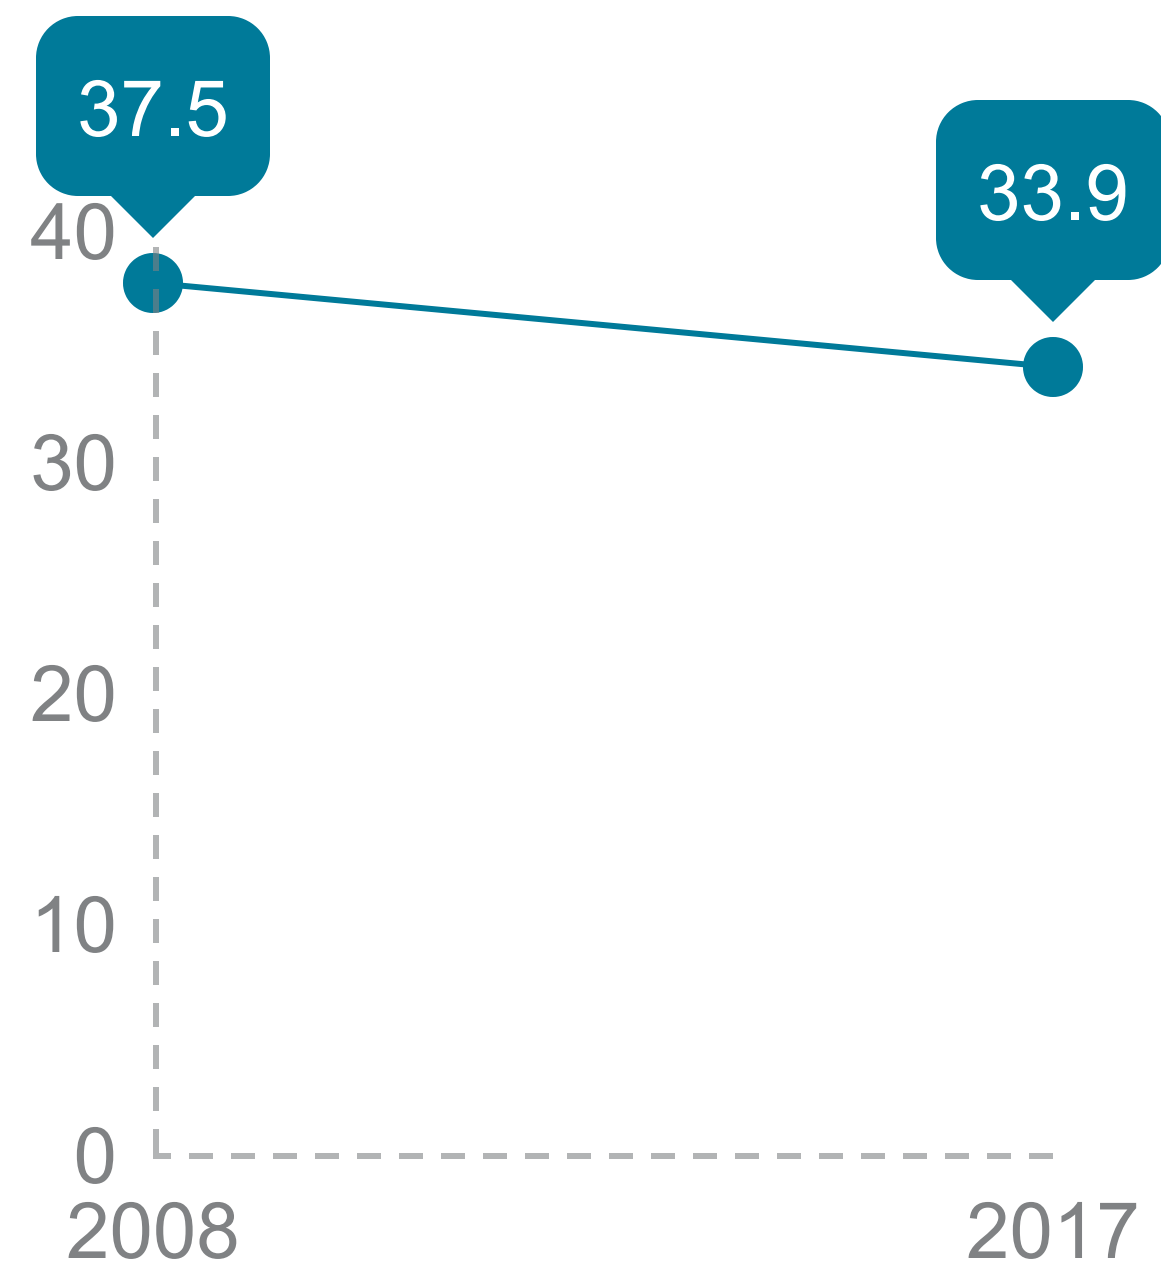

Note: MOE = Margin of Error. The MOE is a measure of sampling error and expresses the maximum range in which the rate is expected to differ from the actual population. The MOE is calculated for the derived estimates at the 90% confidence level.

The marriage rate has declined since 2008 for men and women aged 15 and older in the U.S.—a drop of 9.6% overall.
