

Charting Marriage & Divorce in the U.S.: The Adjusted Marriage Rate, 2008-2021

Author: Krista K. Westrick-Payne

Beginning in 2008, the U.S. Census Bureau began asking respondents of the American Community Survey about events experienced in the past 12 months including marriages and divorces. In the same year, they also began asking respondents to report on the number of times they had been married. In conjunction with information on respondents' marital status, the NCFMR has been calculating and reporting on marriage and divorce rates in the U.S. since these variables were first made available to the public. In a special release series, we provide single-year estimates charting marriage and divorce rates spanning the years 2008-2021. In this release, we focus on the adjusted marriage rate.

Adjusted Marriage Rate

$$\left[\frac{\text{number married in the past 12 months}}{\text{(number married in the past 12 months + the currently unmarried population aged 15 or older)}} \right] \times 1,000$$

Note: MOE = Margin of Error is a measure of sampling error and expresses the maximum range in which the rate is expected to differ from the actual population. The MOE is calculated for the derived estimates at the 90% confidence level.

Universe: Population 15 years and over. 2008-2019 & 2021 American Community Survey, 1-year estimates. ³All estimates related to the year 2020 were drawn from NCFMR analyses of American Community Survey, 1-year Experimental PUMS data, as such MOEs are not reported because comparable estimation to prior years is not possible. The standard 2020 ACS 1-year data products will not be released due to the impact from the COVID-19 pandemic on data collection and data quality.

U.S. Adjusted Marriage Rate

- The marriage rate has declined since 2008 for men and women aged 15 and older in the U.S.—a drop of 21.1% overall.
