

CFDR Update: June 30, 2017

Confronting Poverty: Tools for Understanding American Inequality

This new website, created by Mark Rank, provides a set of tools for learning more about poverty and inequality in the United States. The focal point of the website is a poverty risk calculator that estimates for the first time the likelihood that an individual will experience poverty at some point in the future. The idea is similar to the heart disease risk calculators that can be found on the Internet. In this case, the data is based on the Panel Study of Income Dynamics (PSID). There is also a discussion guide designed for various groups to further explore different issues around poverty and inequality. The link to the website is:
