National Cancer Institute Releases New Social Determinants of Health Data Set

The Healthcare Delivery Research Program of the National Cancer Institute has released a new Social Determinants of Health data set. The data set includes select social determinants of health data elements, including race/ethnicity, education, poverty, urban/rural, socioeconomic status, and racial residential segregation indices defined using 2008-2012 American Community Survey data and 2010 definitions of rural urban commuting areas at the census tract level. You can request the data set and additional documentation [here](#).
