CS 1050: CS PRINCIPLES

Semester Hours: 3.0

Coordinator: S. Roy

Text: Blown to Bits: Your life, liberty, and happiness after the digital explosion

Author(s): ABELSON, H., LEDEEN, K., & LEWIS, H. R

Year: 2008

SPECIFIC COURSE INFORMATION

Catalog Description:

CS 1050 CS Principles (3): Computing as a creative process; Problem solving using abstraction; How data and information create knowledge; Algorithms and computer programs; Internet, digital devices and their impact on society; Privacy and security issues; Computation leading to innovations in other fields. Prerequisites: MATH 95 or higher.

Course type: SELECTED ELECTIVE

SPECIFIC COURSE GOALS

- I can demonstrate computational thinking practices
- I can use the core ideas of computer science, such as abstraction, and algorithms
- I can do simple computer programming
- I can give an overview of the Internet and its impact to the human society
- I can discuss the privacy and security issues in using digital devices

LIST OF TOPICS COVERED

1. Connecting Computing (~10%)
   - Introduction to computers, digital devices, the Internet and Big Data
   - The structure of the Internet
   - How computation led innovations in different science fields
   - (Positive and negative) impact of computing and Internet on human society
2. **Computational Artifacts (~15%)**
   - Create a webpage using HTML
   - Data representation in digital devices: decimal to binary conversion, binary arithmetic, Base 16, and color (RGB), more
   - What is a computer program?

3. **Abstraction in Art / Life / Programming (~15%)**
   - Use of abstraction in computation or modeling
   - Representing information or knowledge for computational use

4. **Computational Thinking (~20%)**
   - Introduction to Algorithms
   - How to analyze a problem to design the algorithm for solving the problem
   - Example algorithm: How to repeat an operation by using the “conditional loop” concept
   - How to write a program implementing an algorithm (e.g. use of the loop construct)

5. **Understanding popular algorithms (~15%)**
   - How to find stuff: search algorithms (linear and binary search)
   - How to arrange stuff: sorting algorithms (insertion sort and selection sort)

6. **Special hands-on programming experience (~13%)**
   - Introduction to hands-on programming environments (e.g., robots, MIT Scratch lab), which enable programmers to create interactive stories, games, etc.

7. **Secrecy and Privacy in the digital world (~12%)**
   - Data theft and unintended information disclosure
   - Cryptography for data encryption.
   - Privacy issues related to the use of the Internet, online social networks, mobile devices, and the likes
