

Apple iDVD Tutorial

GETTING STARTED

iDVD is a program that allows you to create a DVD with menus and graphics of a professionally made commercial disc to play on your home DVD player. To Begin your iDVD project, you will need to have an existing iMovie project saved on an external firewire drive or on your computers hard drive. Please allow a minimum of 2-3 hours for a typical 30-60 minute project.

TABLE OF CONTENTS

In this tutorial, you will learn the following:

1. Setting Chapter Markers	Pg. 3
2. Working With Themes	Pg. 6
3. Adding Files to Drop Zones	Pg. 7
4. Editing Menu Animations	Pg. 7
5. Inserting more media	Pg. 8
6. Customizing Themes	Pg. 9
7. Previewing	Pg. 10
8. Burning	Pg. 11

1. SETTING CHAPTER MARKERS

Before creating a DVD, you may want to set Chapter Markers in GarageBand so that iDVD will know how to split your movie into menu chapters. To set Chapter Markers, you will need to follow the steps below:

1. With your project open in iMovie, click on the **Share Menu** at the top of the screen and select **Media Browser**.
2. A window will pop up with size options. Place a checkmark in the box next to the word **Large** and then click **Publish** (Fig. 1). Your movie will now be accessible from any program with Media Browser capabilities.

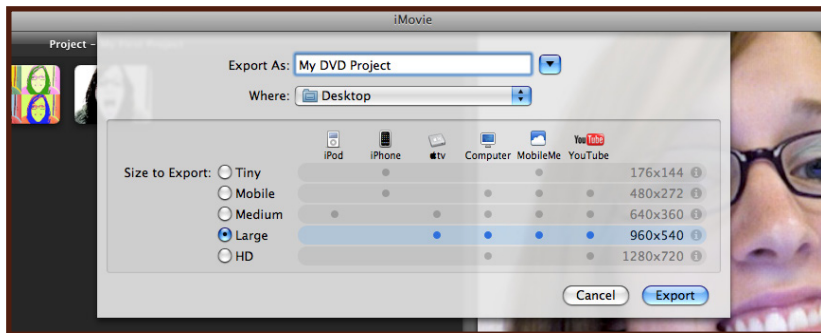

Figure 1. Sharing your movie from iMovie.

3. Open the GarageBand application. A window will open with new project options (Fig. 2). Click **New Project**. This will ask you to input your project name and select a save destination. Ignore the Tempo, Signature and Key settings. Click **Create**.

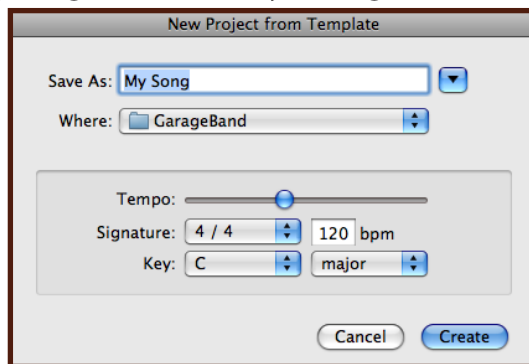

Figure 2. Opening a new project in Garageband.

4. Once your new GarageBand Project opens up, click the **View/Hide Media Browser** button on the very bottom right hand side of the display window (Fig. 3). Remember, you shared your iMovie project with the Media Browser, so this is where you will find it.

Figure 3. View/Hide Media Browser

2. SETTING CHAPTER MARKERS CONT.

5. When the Media Browser opens, click the **Movie button** located at the very top right hand (Fig. 4). From there make sure the iMovie tab is pulled down and click on your **iMovie project**.

Figure 4. Media Browser

6. If you checked more than one box while sharing your iMovie project, multiple sizes of the same movie will appear. Make sure you select the large version of your movie. Click and drag it to the timeline. This will make a new Movie Track appear containing your iMovie project.

7. Now that your movie is officially in GarageBand, you can start to add chapters. First take the play head (an arrow with a line that runs through and along the movie track) and move it to the spot where you would like a new chapter to start (Fig. 5).

Figure 5. Play Head

3. SETTING CHAPTER MARKERS CONT.

8. In order to create the start of a chapter here, you can either hit the **“p” key** on your keyboard (this is a shortcut from the Edit Menu) or you can click on the Bar that says **Movie Track** and a window will appear at the bottom of the display window (Fig. 6). In this window you can click the button that says **Add Marker**.

Figure 6. Select movie track bar.

9. You will now want to name your chapters. Do so by clicking on the bar that says **Movie Track** and then select a chapter (Fig. 7). Click on the **current chapter title** (probably titled Chapter 1, 2, 3...), and start typing what you would like to name to be (Fig. 7).

Figure 7. Movie track window.

10. Now it's time to send your movie with chapters to iDVD. Go to the **Share Menu** at the top of the screen and click **Send Movie to iDVD**. This will automatically launch iDVD and open your project. You can proceed to use iDVD using this guide as needed.

4. WORKING WITH THEMES

When creating your iDVD, you will choose a Theme for your menus. This will allow you to choose a look for your DVD menus. To do this, have your iDVD project open and click on the pull down menu to the right of the preview screen (Fig. 8). This menu should automatically say 7.0 Themes. You can choose to change the series of themes by clicking this dropdown menu, or you can simply click on a theme of your choice from the list below the menu. When you choose a Theme it will be applied to the menu you are currently viewing.

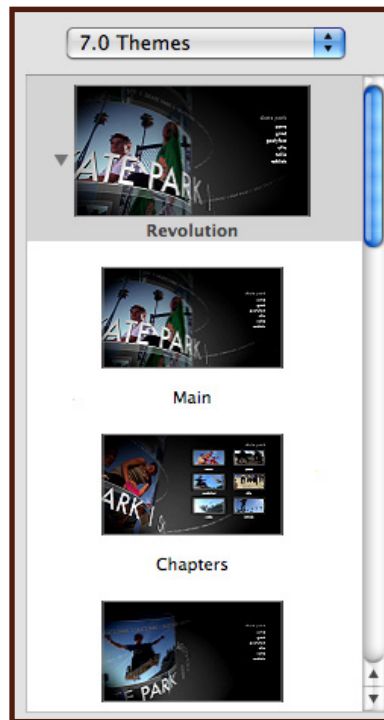

Figure 8. Theme Tab

To apply themes to all your menus click **Advanced > Apply Theme To Project** (Fig.9). If you decide to change your theme just click on another **Theme** in the drawer, just be sure to apply it to your entire project.

Figure 9. Applying theme to project.

5. ADDING FILES TO DROP ZONES

Drop Zones are areas in your menu that can be edited by adding still images and movie clips. There are two ways to add media to a **Drop Zone**, choose one that you are most comfortable with:

- Click and drag the file into the area in the iDVD menu that says **Drop Zone** (Fig. 10).
- Click **Project > Edit Drop Zones**. This will give a list of the drop zones that are in the selected theme. Here you can click and drag files into the designated drop zones.

NOTE: To place an image or movie precisely where you want it in the window, click in **Drop Zone** and drag the file to the desired position. This may be useful for images that are too large to fit in the **Drop Zone** area.

Figure 10. Drop Zone

6. EDITING MENU ANIMATIONS

Menus with motion will have a small icon in the bottom right hand corner and a timeline at the bottom of the preview window. The timeline will show you the progress of the menu animation. Each Theme will have a short animated introduction before the menu appears; you can turn the animated introduction off by un-checking the box to the left of the timeline (Fig. 11). This will not turn off the motion of the menu. To turn off the motion click and uncheck the **Motion** option under the **view** menu.

Figure 11. Menu Animation

7. INSERTING MORE MEDIA

Sometimes you may want to put picture slideshows, or multiple iMovie projects onto one DVD, adding new media to your menus can do this. There are three ways to insert additional media, choose one of the following:

- Click and drag your completed file(s) into the preview window.
- Click the Add a submenu, movie, or slideshow button (Fig. 12), this will add another menu in which you can add files, folders, and slideshows.

Figure 12. Add submenu, movie, or slideshow

- Click the **Project Menu** at the top of the screen and select **Add Submenu**, **Add Movie**, or **Add Slideshow**. Here you can also choose to add text or a **Title Menu** button. A text box will pop up on your main menu and you can type anything you want into it and then move it anywhere on your main menu that you would like.

To view the files and folders you have added to this iDVD project, click the **DVD Map** button located at the bottom center of the display window (Fig. 13).

Figure 13. DVD Map

To add files to a Slideshow, double-click the square in your DVD map with your slideshow. This will open your slideshow and options on the preview screen. Here you can add images, and customize many Slideshow options (Fig. 14), including but not limited to:

Figure 14. Slideshow option

- **Slide duration** - This option will allow you to choose how long your slide will be on the screen. You can choose from 1-10 seconds or Fit to Audio. If you wish to have an Audio track play while you view your slides the Fit to Audio option will make your slides fill the duration of the song equally.
- **Transitions** - This option will add a selected transition to all your images.
- **Audio tracks** - Add an audio clip to your Slideshow. Just drag and drop an audio file to the image next to the Slideshow volume bar.
- **Adding Images** - To add images to your slideshow, simply click and grab your image file and drag it to the preview window where it says Drag images here.

7. INSERTING MORE MEDIA CONT.

• **Settings** – To view and modify additional settings, click the image that says **Settings** under it. A new window will pop up (Fig. 15). Here you can check and uncheck the boxes as desired.

Figure 15. Additional slideshow options

8. CUSTOMIZING THEMES

You can customize your DVD's menu using the **Inspector Window**. You will find this at the bottom of the display window on the left hand side (Fig.16). Here you can create your own theme or change the settings on a preset theme. The **Inspector Window** contains the following options:

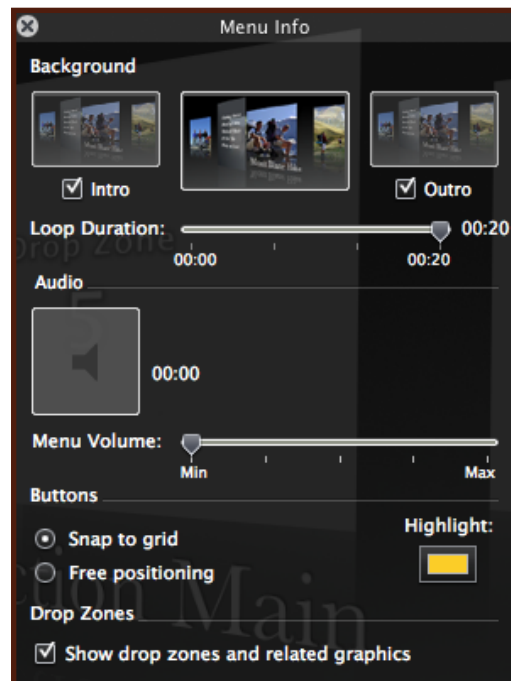

Figure 16. Inspector Window

- **Background** - To change the image on your background, choose your image, click and drag it over the middle image in the **Background** section. In this section you can also choose to have the Intro and Outro turned on or off by checking or unchecking the boxes next to them.
- **Loop Duration** - Here you can change the length of your main menu loop. All you have to do is drag the arrow to the time length you want.
- **Audio** - To change the music that is playing on your DVD's main menu, grab the audio icon present and pull it off of the display screen. This will automatically delete it, making space for a new clip. Now click and drag the sound clip that you wish to replace it with and drop it in the box where the previous sound clip was. You can adjust the volume of the sound clip by moving the arrow on the **Menu Volume bar**.

8. CUSTOMIZING THEMES CONT.

• **Buttons** - In this section you can choose to snap a button to a grid or have it free positioned by clicking the corresponding dot. You can also change the highlighting color by clicking the color box and then selecting a color from the swatch window that pops up. In order to change the style of a button you must click the **Buttons** tab on the bottom right of the main display screen (Fig.17). Once there, simply choose the desired style from the pull down menu (text, bullets, shapes etc.). Then select the image you want to use from the image bank directly below the pull down menu.

Figure 17. Buttons Tab

9. PREVIEWING

Previewing your movie is a great way to double-check your iDVD project for any errors. When previewing, your menus will work as if you had burned the DVD and placed it in a DVD player. Use this mode to check your menu buttons, slideshows, scene selection, button transitions, or your DVD as a whole. To preview your movie, just click the **Preview Play** button at the bottom of the display window (Fig. 18). Use the **DVD controller** (Fig. 19) to navigate through your DVD. Use the playback buttons at the top of the controller to view your movie. You can use the **Menu** button to go to the main DVD menu. You can control the volume with Volume slider at the bottom. Make sure to double-check your chapter markers are working. When you are done previewing your DVD, you can press the **Exit** button in the top right corner of the controller. This will exit the **Preview** mode and go back to **Edit** mode.

10. BURNING

When you are satisfied with your iDVD project, you can start the burning process. The burning process will take a considerable amount of time to complete. Typically, it takes two to three minutes to encode and write one minute of video to the disc. Be sure you will have time to complete your project during StudentTech's hours of operation. While using StudentTech's machines you must use DVD- media to burn your project, this includes DVD-R and DVD-RW. DVD+ media will not work on StudentTech's equipment. If you do not have any blank media to burn your project, you can purchase it from StudentTech. To burn your iDVD project, do the following:

1. Click on the **Burn** button to open the burn option (Fig. 20).

Figure 20. Burn button (no clicks)

2. Click the **Burn** button once more to start your burn (Fig. 21).

Figure 20. Burn button (one click)

Once you have started the burning process, iDVD will display the progress of your project (Fig.22). In the far right of the burning window you will see a small preview screen, this will display where in your movie iDVD is processing/burning. In the center of the window will be a progress bar, this will show how much of the current step is complete. iDVD takes 5 steps to burn a DVD, these are shown on the far left side of the window. The current step will be marked with a blue dot to the left of its name. This process will take a considerable amount of time, so remember to make time to burn. Once your DVD has burned you will be prompted to enter another disc to make another copy. Inserting a disc will automatically start to burn another copy. If you do not wish to create another copy, simply click **Done**.
