Step up to the “Plate”

**Dietary Guidelines**

2,000 calories is a recommendation but this varies widely depending on the person and activity level
6 servings of grain per DAY (at least half whole grain)
2 ½ servings of vegetables per DAY (eat the rainbow)
2 servings of fruit per DAY (variety is key)
3 servings of low-fat or fat-free dairy per DAY
5 servings of meat, poultry, seafood, nuts or seeds per DAY
Include 3-4 servings of nuts and seed per WEEK
2 servings of fats and oils per DAY
5 or less servings of sweets and added sugars per WEEK

**Thinking About Portion Sizes**

Evaluate portion sizes using nutrition labels and other resources. Be conscious of how much food you are eating especially at restaurants where portions are typically larger.

**“Superfoods” and Diets**

Superfoods is a term used by the media. This term is not regulated so you can call anything a superfood. Additionally, there isn’t a single food that has all the nutrients required for your body. Diets such as Adkins, Whole30, Paleo, Weight Watchers etc. are not practical and sustainable because they drastically cut calories and likely eliminate entire food groups from your diet. Choose a variety of nutrient dense foods instead.

**Exercise**

150 Minutes of activity per week is recommended for adults in addition to a healthy diet. Some easy ways to incorporate this into your day would be take the stairs, ride your bike, walk to class, go to the Rec Center, join an intramural team, or do squats, pushups, planks, etc. as a study break.

**Sports Nutrition**

After working out your body needs carbs to give you energy and protein to rebuild your muscles. Without a balance, your body will not be able to optimally recover or build muscle. A great example of a post workout food is chocolate milk.

**Eating Healthy on a Budget**

A common misconception is that healthy food is expensive and expires fast but there are ways to combat this by buying produce that is on sale or in season, utilizing canned or frozen foods for a longer shelf life, and making a grocery list to reduce waste later.

Some foods to consider:

- Whole fruit (bananas, apples, oranges)
- Fruit cups (peaches, pears, applesauce, etc)
- Frozen fruit (grapes, berries, etc)
- Milk (even if its chocolate)
- Yogurt (Try Greek!)
- Cheese
- Beans, lentils, tofu, nuts, seeds, nut butter, quinoa, peas, egg
- Vegetables (carrots, peppers, etc.)
- Salads with whatever you have!
- Frozen vegetables
- Canned vegetables (look for low sodium)
- Whole Wheat Pasta
- Brown Rice

---

**Eating in a Dining Hall**

Pick a Protein
Grab a Grain
Vary your Veggie
Down your Dairy
Finish with Fruit

Eating in dining halls can be overwhelming for many reasons. Remember portion sizes are important and choose options that are nutrient dense!
